

ARIANNA (s)

This variety, bred by Berrylab, ripens very early, about the same time as Alba (s). The fruits are large, even very large at the beginning of harvest. The fruit has a bright, intense red color. The berries are comparatively heavy and have a good taste. The plant is vigorous, healthy and hardy. Arianna (s) is suitable for 2-year cultivation.

DELY (s)

The heart-shaped fruits are large, bright red and shiny. The excellent taste is ideal for direct marketing. The ripening period begins shortly before Clery (s). The productivity is moderate. The fruit firmness is good, but not sufficient for wholesale not sufficient for wholesale. Dely (s) is vigorous and resistant to leaf and root diseases, somewhat sensitive to powdery mildew. Suitable for 2-year suitable for 2-year cultivation.

CLERY (s)

Maturity begins a week before Elsanta (s). The fruits are large and uniform, bright medium red, good taste and very firm. Clery (s) is good resistant to leaf and root diseases, especially against powdery mildew. Under fleece must be watched botrytis infestation. The variety is suitable for earliness under film and in tunnels. Clery (s) has a good growth habit and is also content with poorer soils.

APRICA (s)

With uniform, large, bright red fruits, the variety Aprica (s) attracts attention. The shiny fruits have a pleasant taste, they are very firm, insensitive to rain and durable. The ripening begins about 4 days after Clery (s). The flowers are under the foliage. The robust plant has an upright growth and a high yield potential.

ASIA (s)

Asia (s) is one of the current main varieties. It convinces with its attractive fruit and excellent taste. The fruits are very large, bright red and shiny, the firmness is good. The first fruits are almost too big (up to 220 g). Too high precipitation can affect the fruit quality. Asia (s) can be used in all cropping systems and is suitable for 2-year cultivation. Herbicide use must be made carefully.

JOLY (s)

Large, shiny, light to medium - red fruits with a conical, very regular shape and good taste are typical of this variety. Joly (s) ripens about the same time as Darselect (s). The yield is high, the fruits are firm and very easy to pick. The plants are good growers, robust and can cope with less good soils.

FEDERICA (s)

In current breeding programs, taste again come more into focus. Federica (s) is an example of this. Its very good taste and the strong red fruit color with a beautiful shine are ideal for direct marketing. The fruits are medium to large, the first berries are very large. The robust plant has a vigorous growth and is insensitive to rain.

SIBILLA (s)

Sibilla (s) was bred in Italy. It ripens about 10 days after Clery (s). The large uniformly shaped fruits are long conical and bright red. The flesh is beautifully colored. The fruit is firm and keeps well. The taste is very good when fully ripe. Sibilla (s) forms long flower stalks. This hardy plant has vigorous growth with dense foliage. The yield potential is very high.

TEA (s)

Tea (s) is a newer variety with very good fruit quality, good taste and high yield potential. The large fruits are homogeneous and have a nice medium red color. The sepals are very pronounced. The fruit ripening of Tea (s) begins about 2 days after Roxana (s). The robust plant is very vigorous.

THURIGA (s)

One of the best varieties for direct marketing! Thuriga (s) convinces with its excellent taste and an attractive, large and uniform fruit. The fruits are medium to bright red coloured, firm, durable and well transportable. The plant is very vigorous and little susceptible to root diseases. It is suitable for biennial cultivation. An early planting date increases the yield.

MURANO (s)

The very good taste and homogeneous fruits distinguish Murano (s). The bright red, shiny berries have a good size. Even high summer temperatures do not affect the fruit quality. The plant has an upright growth, is growing strongly and very productive. Murano (s) has become the leading everbearing variety.

MARIGUETTE (s)

Marigquette (s) is a French breeding with outstanding taste. The medium sized fruits are bright red and have an elongated shape. Superior in taste to most everbearing varieties but only average in yield performance. The variety is healthy and vigorous.
